<div class="df_qntext">How many B-ESS fires have occurred in Korea?

B-ESS fires have occurred in Korea and elsewhere worldwide, but Korea's consecutive fire accidents are quite uncommon cases concentrated in a short period. The Korean government formed an official investigation committee and conducted two investigations into the causes of the 28 fire accidents from August 2017 to June 2019 [8,9].

<div class="df_qntext">What happened in South Korea?

South Korea is a leading producer of lithium batteries, which are used in many items from electric vehicles to laptops. Fire official Kim Jin-young said 18 Chinese, one Laotian and two South Korean workers had been confirmed as among the dead. A final body had yet to be identified, and there are fears at least one more person may be missing.

<div class="df_qntext">What causes B-ESS fires in Korea?

B-ESS fires in Korea are socially constructed by factors related to environments (strong incentives, inadequate regulation, and different cultural background of the stakeholders), organization (tight coupling of various sub-technologies and miscommunication), and cognition/choice (systematic pressure on profit-seeking and false sense of security).
