

What is the future of electricity supply in Iraq?

There are a number of pathways available for the future of electricity supply in Iraq but the most affordable, reliable and sustainable path requires cutting network losses by half at least, strengthening regional interconnections, putting captured gas to use in efficient power plants, and increasing the share of renewables in the mix.

How much natural gas did Iraq produce in 2022?

Iraq consumed significantly more natural gas than it produced in 2021, primarily for electric power generation. The country also flared over 630 billion cubic feet (Bcf) of natural gas in 2022 due to inadequate pipeline and processing infrastructure, making it the second-largest flaring country globally.

Why is energy important in Iraq?

Energy in Iraq plays a crucial role in both the national economy and the global energy markets due to the country's vast oil reserves and significant status within the Organization of the Petroleum Exporting Countries (OPEC). Iraq holds abundant oil and gas resources and has strong solar PV potential.

How has Iraq's energy system changed over the years?

This has introduced a number of vulnerabilities to Iraq's energy system. For example, payment issues last summer led to Iran cutting exports, significantly exacerbating electricity shortages in Iraq during peak seasonal demand. As oil production has soared, so has the amount of associated gas produced alongside.

How does Iraq generate electricity?

Iraq's electricity generation primarily depends on fossil fuels. In 2021, natural gas was the largest source at 57.3% of the total, followed by oil at 36.7%. Renewable energy, mainly from hydroelectric power, contributed 5.9%. As of 2023, the 30 gigawatts (GW) of installed capacity cannot meet summer peak demand.

Why is Iraq's energy system vulnerable?

However the capacity to capture and process this gas has not kept pace. The inability to utilise its gas riches means that the country's gas deficit has grown, and Iraq now relies on imports from Iran to meet increasing demand. This has introduced a number of vulnerabilities to Iraq's energy system.

This book recounts how neoconservatives inside the Bush administration worked secretly with the Israeli lobby and the Israeli government to satisfy Israel's energy needs. Israel has significantly benefited since the 2003 Iraq War, ...

Seit Ende 2021 widmen wir uns mit unserer Geschäftssparte Agena Energy in den Bereichen Wassertechnologie, Solartechnologie, Geothermie, Windenergie, Wasserkraft einer nachhaltigen, sauberen Umwelt. Wir sind der Überzeugung, dass die Zukunft dem GreenTech gehört, einer Technologie, bei der sich Innovation und Umwelt miteinander verzahnen.

Iraq's Energy Sector: A Roadmap to a Brighter Future is the International Energy Agency's first in-depth analysis of the country's energy sector since 2012. It examines the problems affecting Iraq's power sector and offers ...

Iraq holds the 12th largest natural gas reserves in the world, estimated at 131 trillion cubic feet (Tcf) at the end of 2022, predominantly located in large oil fields in the south and mostly associated with oil production. Despite these substantial reserves, Iraq faces regulatory, investment, and infrastructure challenges, which have

kept natural gas production largely unchanged since 2016. The majority of Iraq's natural gas, about two-thirds, is produced as a by...
