Controlador de Temperatura para Refrigeração e Aquecimento. Os controladores de temperatura N321 são ideais para medir, indicar e controlar a temperatura em várias faixas, dependendo do sensor utilizado. Os usuários podem programar o tipo de ação de acordo com a aplicação: ação direta (refrigeração) ou ação reversa (aquecimento).

Ampla linha de termostatos eletrônicos, abrangendo aplicações de aquecimento, refrigeração com degelo, aquecimento solar, temporização e controle de umidade e temperatura. O recurso de Cookies está desabilitado em seu navegador e a navegação poderá ser afetada.

Todos los productos NOVUS están garantizados frente a defectos de materiales o mano de obra durante el período indicado en el término de garantía, a partir de la fecha de compra. ... Controlador Diferencial para Calentamiento Solar. El N321S es un controlador para aplicaciones de calentamiento solar. Comanda una bomba de circulación de ...

The N321S is a controller intended for solar water heating applications. It controls the water circulation system based on the difference of temperature between the solar collector and the storage tank (or swimming pool). The instrument contains two NTC-type temperature sensors and a control output for activating the water circulation pump.

Armenia has become the 104th full member of the International Solar Alliance (ISA). The Armenian Embassy in India announced this important development, which was formalized through the exchange of official documents between Armenia's Ambassador to India, Vahagn Afyan, and Abhishek Singh from the Indian Ministry of External Affairs.
