Google satellite map provides more details than Maphill's own maps of Bouvet Island can offer. We call this map satellite, however more correct term would be the aerial, as the maps are primarily based on aerial photography taken by plain airplanes.. These planes fly with specially equipped cameras and take vertical photos of the landscape.

Unfortunately such a simple explanation doesn't seem likely, as the article investigates at length---the provisional correct answer, slightly more complicated, was found over the course of a few years of archive diving by the various commenters, and goes something like this:
