

Bulgaria green power distribution

Does Bulgaria have a good energy sector?

Bulgaria's energy sector is at a critical juncture, with two main objectives shaping its direction: decarbonization and reducing reliance on Russian energy. Over the past year, Bulgaria has made considerable progress in expanding its renewable energy capacity, particularly in solar power.

How many renewable power plants will Bulgaria have in 2024?

Bulgaria will add over 2,500 MW of installed renewable power capacity by the end of 2024 through the installation of 700 MW of wind farms, 1,600 MW of solar parks, and 219 MW of biomass-fired power plants. In Bulgaria, the National Electric Company (NEK) owns 15 conventional hydro and pumped-storage plants.

How much energy does Bulgaria produce?

Currently, the installed power generation capacity in Bulgaria is 13,247 MW, and the available capacity is 10,771 MW. To support its energy needs, Bulgaria imports natural gas, oil and oil products, and solid fuels (anthracite and black coal, coal coke). The main local energy source in Bulgaria is lignite coal.

How can energy communities be developed in Bulgaria?

Another important component of the functioning of an energy community is the ability to sell surplus power to the grid. The absence of clear regulations governing these aspects remains a major gap. A major obstacle to developing energy communities in Bulgaria is the low level of awareness in the country.

Will Bulgaria choose solar PV over other energy technologies?

As a result, it is likely that a growing number of prosumers and energy communities in Bulgaria will choose solar PV over other technologies like wind, biomass or biogas.

What does Bulgaria's energy policy look like?

The overall trajectory of energy policy in Bulgaria continues to rely heavily on high-cost, large-scale technologies and projects, including expanding the role of natural gas, and doubling down on nuclear power.

Bulgaria's energy sector is at a critical juncture, with two main objectives shaping its direction: decarbonization and reducing reliance on Russian energy. Over the past year, Bulgaria has made considerable
