Will Estonia be fully solar powered by 2030?

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and innovative startups, it now aims to be fully green-powered by 2030.

How much solar power does Estonia have in 2022?

That makes another record-breaking year for solar on the continent, with a total of 10 GW more capacity added than expected. Regarding solar power per capita, Estonia has emerged as one of the new leaders. The country is ranked 6th among 27 EU members, with 596 Watt per capita in 2022, jumping from 405 in 2021.

Does Estonia have a good energy policy?

So far, it has been a key objective of Estonian energy policy. Being a Nordic country with less sunlight than in Western and Southern Europe, Estonia has achieved a solid place at the top with its 1,923 sunny hours in the year.

Will Estonia reach the 2030 national energy & climate plan (necp)?

With accelerated growth in recent years, it has the potential to reach an even higher mark soon. Thanks to a steady flow of investments and public-market cooperation, Estonia has already reached the goals designated for the 2030 National Energy and Climate Plan (NECP).

Is Estonia a bureaucracy-free country?

Estonia, one of the most bureaucracy-free nations in the world, has streamlined the creation of a manual of proceedings and identification of suitable areas for development with local authorities. The next step is to implement a one-contact-point system.
