Is Greenland a potential E-Fuels hub?

Greenland's transition from a fossil fuels-based system to a 100% renewable energy system between 2019 and 2050 and its position as a potential e-fuels and e-chemicals production hubfor Europe,Japan,and South Korea,has been investigated in this study using the EnergyPLAN model.

Why is Greenland a good source of energy?

The energy is stable and environmentally sustainable. Greenland's enormous untapped hydropower resources exceed our domestic demands many times over,and Greenland has the potential to become a net energy exporter. Due to global warming the ice sheet increases meltwater,which results in larger reservoir capacities.

Does Greenland have a decentralised energy system?

No comprehensive study on Greenland has been found, as existing studies focus on small individual communities. Such studies provide a tailored perspective on decentralised energy systems, considering local climate conditions, energy demand, and quality of local renewable resources.

How much energy is needed in Greenland in 2050?

In 2050,curtailment of about 4%of the total electricity generation is required,a value known if three renewable resources complement each other in a sector coupled energy system . In the reference system,a major share of heating in Greenland is supplied by district heating,which is dominant in larger towns.

Does Greenland have a place-based approach to energy production?

The lack of electricity transmission between urban settlements in Greenland necessitates a place-based approach to energy production. In keeping with this,this case from Greenland is intentionally laid out differently to the others in the Handbook.
