

Guernsey digital power solution

Enter the 1,875-MW Guernsey Power Station, located in Guernsey County in southeastern Ohio. The plant was built on property that included an existing 42-inch Rockies Express Pipeline and AEP's ...

This meant that the Vale power station supplemented an additional 34.2 MW of power, on top of the sub-sea cable. Work done over the summer months forms part of an ongoing multi-million pound investment in essential generating equipment located at the station and the electricity network infrastructure.

The Government has ruled out the introduction of digital ID cards after former premier Sir Tony Blair called for the documents to help control migration. Sir Tony, who championed ID cards when he was in office only for the idea to be killed off after Labour lost power, said the world was moving to a digital form of the document.

and

While it has long been championed as part of the solution - with Energy and Security and Net Zero Secretary
Ed Miliband first announcing plans to develop carbon capture projects for power plants in 2009 during the last
Labour government - and it uses well-tested technology, little progress has been made on it in the UK.

Britain must radically shake up the power system, build vast amounts of new pylons and secure £40
billion of annual investment to hit its 2030 clean energy goals, ministers have been told. The National Energy
Systems Operator (Neso) said that while Labour's plan to decarbonise the grid by the end of the decade is a
"huge challenge" it is "achievable".

A second cable will allow us to meet around 99% of Guernsey's current and future electricity needs and will
dramatically decarbonise our use of energy. The island's current top-up of electricity demand without the
second connection would remain the hydrocarbon power station, which does not fit with the intention to
decarbonise our island.
