

What are the criteria for energy transition in Indonesia?

The first level evaluates four criteria pertinent to Indonesia's context: energy transition (A1), energy-related measures for economic development (A2), mining sector governance (A3), and resource transition of critical minerals beneficiation to support the energy transition process in Indonesia (A4).

What is Indonesia's energy mix in 2023?

In 2023, renewables accounted for 19% (65 TWh) of Indonesia's electricity mix, including both on-grid and off-grid sources. Solar and wind generation only contributed 0.2% (0.7 TWh) and 0.1% (0.5 TWh), respectively. Hydro was the largest contributor at 7% (25 TWh), followed by bioenergy at 6.4% (22 TWh) and geothermal at 4.8% (17 TWh).

How is Indonesia's electricity demand compared to 2023?

Annual data from 2000 to 2023 is taken from the Handbook of Energy and Economic Statistics of Indonesia 2023. The 4.7% annual rise in electricity demand between 2023 and 2030 is calculated based on the historical demand data from 2023 and projected demand in 2030 as stipulated in the RUPTL 2021-2030.

Will Indonesia's energy transition be a good idea?

Evidence suggests that Indonesia's energy transition should be well under way. The government has set a target to support renewable energy development in the New Energy and Renewable Energy Bill through increasing on-grid renewable capacity, converting diesel power generation to solar and expanding rooftop solar.

Is Indonesia a good source of energy?

Indonesia is one of the world's largest and fastest-growing energy consumers. While natural gas and oil production have been falling over the past decade, coal production has risen to satisfy both domestic and export demand. Renewable energy has seen steady growth, with an energy transition plan unveiled in 2022 and a green energy investment fund

What is Indonesia's primary energy supply?

Indonesia's primary energy supply is dominated by fossil fuels. According to MEMR, out of a total final energy consumption of 1.24bn barrels of oil equivalent (boe) in 2023, 317m boe, or 25.6%, came from coal; 264m boe, or 21.3%, from oil fuel; and 121m boe, or 9.8%, from natural gas.
