Primary industrial batteries tend to use more energetic lithium chemistries and higher quality materials, enabling them to outperform consumer grade cells. Since industrial batteries are made to last decades and operate in more extreme environments, quality control is paramount, as battery failure can be totally unacceptable for certain highly ...

The original reason for a battery failure can be one of many. Some of those reasons include manufacturing defects and poor design, but many others may simply be how the battery is cared for or what conditions it is used in. This is the trade-off, because the design of lithium-ion batteries provides us with ample energy and current for our devices.
