

Linka energy a s Sri Lanka

Why should you choose Linka energy?

You can choose us for the ongoing maintenance and service of your plant. Linka Energy is a specialist in the development, design and construction of fully automated biomass plants from 250 kW - 15 MW. The primary fuel types are straw, wood chips and wood pellets, but also more exotic fuels can be used.

Will Sri Lanka add liquefied natural gas plants?

Sri Lanka plans to add additional renewable and nonrenewable power plants over the next 10 years, including liquefied natural gas (LNG) plants. The government is working to develop LNG import facilities and related power plants and is considering options for its aging oil refinery.

Does Sri Lanka have a power grid?

Sri Lanka has already achieved a grid connectivity of 98 percent, which is relatively high by South Asian standards. Electricity in Sri Lanka is generated using three primary sources: thermal power (which includes coal and fuel oil), hydropower, and other non-conventional renewable energy sources (solar power and wind power).

What is the hydropower resource in Sri Lanka?

The hydropower resource in Sri Lanka is divided into two main regions based on water resource, namely the Mahaweli Complex and Laxapana Complex.

How much power does Sri Lanka need?

Sri Lanka must add significant capacity to meet current and future power demand, which is forecast to grow at around 5 percent annually. Sri Lanka has total electricity generating capacity of 40 GWH, as it mainly relies on thermal power, including a Chinese-built coal power plant, which accounts for 45 percent of its supply.

How will Sri Lanka achieve 70 percent electricity production by 2030?

The Sri Lankan government aims to achieve 70 percent electricity production by renewable sources by 2030 and net carbon zero by 2050. The objective is to increase the power generation capacity of the country from the existing 4,043 megawatts (MW) to 6,900 MW by 2025 with a significant increase in renewable energy.

Linka Energy is a specialist in the development, design and construction of fully automated biomass plants from 250 kW - 15 MW. The primary fuel types are straw, wood chips and wood pellets, but also more exotic fuels can be used.

Sri Lanka's energy crisis is a glimpse of what's coming November 4, 2022. Drivers push auto rickshaws in a line to buy petrol from a fuel station, amid Sri Lanka's economic crisis, in Colombo, Sri Lanka, July 29, 2022.
