

# Marshall Islands onsite energy

What is the future of the Marshall Islands electricity system?

The future of the Marshall Islands electricity system depends on upgrading the electricity network, getting better at energy efficiency, and replacing diesel generation with renewable energy in the form of wind and solar. Most of all it depends on our people. Take a look at where we are headed.

What is the Marshall Islands electricity roadmap?

The Republic of the Marshall Islands is calling for ambitious action by all countries to reduce greenhouse gas emissions. We are leading the way by committing to net zero emissions by 2050, with significant milestones along the way. The Marshall Islands Electricity Roadmap presents costed, technically sound pathways to help achieve our NDC.

What are the main sources of energy in the Marshall Islands?

MEC, KAJUR, the College of the Marshall Islands and the University of the South Pacific, all carry out capacity building in support of energy activities. Most of the primary energy supply (90%) comes from petroleum, with biomass used for cooking accounting for nearly all the rest.

How many grid-connected solar systems are in the Marshall Islands?

As a result, the company has moved cautiously towards adopting grid-connected solar systems that do not include energy storage. So far it has only allowed five grid-connected solar installations without storage. Two 53 kWp and 57 kWp systems are at the College of the Marshall Islands. The others are a

What does the 2009 National Energy Policy mean for the Marshall Islands?

This led to the endorsement of the 2009 National Energy Policy, along with the Energy Action Plan, which aims for "an improved quality of life for the people of the Marshall Islands through clean, reliable, affordable, accessible, environmentally appropriate and sustainable energy services."

How many kWp solar systems are in the Marshall Islands?

Two 53 kWp and 57 kWp systems are at the College of the Marshall Islands. The others are a 10 kWp system at the fisheries base, a 30 kWp system at the University of the South Pacific campus and a 209 kWp system at Majuro hospital. MEC intends to move cautiously before allowing a major expansion of grid-connected solar generation.
