

Mexico energy back up

Why is Mexico lagging behind in energy transition?

Yet given its economic strength and vast resources in solar and wind energy, the country is lagging behind in its efforts to transition away from fossil fuels. Mexico is clinging to its traditionally close ties with the fossil fuel industry instead of paving the way to become a global leader in renewable energy generation.

How much energy does Mexico use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Mexico derives more than 80% of its total energy supply from fossil fuels. In 2019, oil contributed 45.20%, followed by natural gas (37.84%), coal (6.44%), biofuels (5.02%), wind and solar (2.75%), nuclear (1.62%), and hydro power (1.13%).

Does Mexico need a new energy reform?

At precisely the time when Mexico needs more legal and economic certainty for market participants in the energy sector, a reform comes along that introduces a range of new problems that could impact investment, competitiveness and the overall direction of the country's economic policies.

What is Mexico's national strategy for the electricity sector?

Mexico's National Strategy for the Electric Sector, while comprehensive in its approach to energy production and distribution, notably omits crucial elements for innovation and new technologies, such as a dedicated digital strategy for the electricity sector.

Why is Mexico clinging to fossil fuels?

Mexico is clinging to its traditionally close ties with the fossil fuel industry instead of paving the way to become a global leader in renewable energy generation. This comes at a high cost for its economy, environment and population.

Is Mexico ready for a green energy transition?

But such a policy push is pending. Under the current administration, Mexico has moved even further away from undergoing an energy transition than before its current President López Obrador took office in 2018. López Obrador has argued that Mexico is not yet ready for a green energy transition.

However, after the electricity reform and the commencement of operations of the Wholesale Electricity Market has opened up the market to private investments, other electricity trading alternatives may be developed in Mexico. The main topic in Mexico is the State's obligation to obtain 35% of its energy from clean sources by 2025.

Enhancing Energy Supply and Reliability in Baja California, Mexico The 200 MW Altar plant and the 400 MW Mexicali Oriente plant are owned and operated by CFE, the Mexican state-owned utility, and they are part of CFE's Strategic Plan for Baja California to guarantee the sufficiency of the electricity supply in
