What is a microgrid controller?

Your microgrid controller is the brain for your microgrid-- the piece of technology that transforms a collection of disparate microgrid energy resources into a cohesive independent power grid.

Does Ageto have a microgrid controller?

Team Ageto has years of hands-on, in-the-field experience with microgrid solutions and management. We have a 100% success rate in getting microgrids up and running -- both behind-the-meter and off-grid power solutions. The ARC microgrid controller will make your renewable energy power system work.

Why do you need an arc Microgrid controller?

The microgrid controller you select matters. That's why we built ARC. The ARC microgrid controller coordinates all the elements of your microgrid into one elegant system -- optimizing both conventional and renewable energy resources, and giving you the monitoring and management tools you need to keep the lights on.

What is the Ageto arc Microgrid controller?

The Ageto ARC microgrid controller is the brain for your microgrid system, seamlessly integrating, optimizing, and managing diverse energy resources. Our goal is to make renewable energy simple. Simple is beautiful. Simple is intuitive. Simple is fueled by innovation, experience and proven success.

What is ETAP microgrid control?

ETAP Microgrid Control offers an integrated model-driven solution to design, simulate, optimize, test, and control microgrids with inherent capability to fine-tune the logic for maximum system resiliency and energy efficiency. ETAP Microgrid software allows for design, modeling, analysis, islanding detection, optimization and control of microgrids.

How does arc monitor a microgrid?

ARC records data every second so you can monitor loads, solar estimates, energy production, and more for precision trending and troubleshooting. The ARC microgrid controller automatically sends email alerts when there's an alarm from any of your microgrid assets. ARC stores alarms and system events so you can view them anytime.

"The microgrid controller, if it's operating at a very high speed, sees the sudden step increase in load or the sudden step decrease in solar production and can quickly dispatch another resource, like a battery, to mitigate it before it becomes a big problem," Allen says. He adds that you simply cannot have a renewable microgrid without a ...
