F., Fichtner, M., Hirsch, T., Jöcker, M., Pitz-Paal, R., et al. (2011). Steam temperature stability in a direct steam generation solar power plant.

<div class="df_qntext">Can direct steam generation concentrating solar power plants use water as heat transfer fluid?

Direct steam generation (DSG) concentrating solar power (CSP) plants uses water as heat transfer fluid, and it is a technology available today. It has many advantages, but its deployment is limited due to the lack of an adequate long-term thermal energy storage (TES) system. This paper presents a new TES concept for DSG CSP plants.

<div class="df_qntext">What are cryogenic energy storage systems?

Cryogenic energy storage (CES) systems, specifically Liquid Air Energy Storage (LAES) systems, are distinguished by their ability to store significant amounts of energy using liquefied air as the medium. The performance analysis of these systems is crucial for assessing their feasibility and optimizing their integration into renewable energy grids.

<div class="df_qntext">Could cryogenic systems be a solution to the energy transition?

With the increasing role of intermittent renewable energy sources, such as solar and wind, cryogenic systems could emerge as a key solution in the energy transition, providing long-term storage capacity with minimal environmental impact and low operational costs.
