

Prism energy Madagascar

Which energy process is available in Madagascar?

As no energy process for Madagascar is available, we considered the generic ones, for fuel oil steam turbine and diesel combustible engine and hydrodam power plant. Reflecting Malagasy conditions and the efficiencies, transport of raw materials have been included in the process.

Why does Madagascar have a low rate of electricity?

Only less than 1% of this demand is supplied by other renewable energy sources. This high share of wood energy is explained by its accessibility and its low cost for the population. Madagascar has a low rate electricity access due to its high price and the insufficient quantity production. The national rate of electrification is only 4.7% only.

What is the energy sector policy in Madagascar?

Flowchart of the energy sector policy in Madagascar. As shown in Fig. 1, the energy sector policy is divided in two main strategies, namely: the institutional reform and public-private partnership.

Does Madagascar have a high solar energy potential?

Due to its location, Madagascar has a high solar energy potential. As shown in Fig. 5, the Global horizontal irradiation is 2000 kWh/m². Almost all regions have more than 2800 h (350 sunny days) of annual solar radiation. In the west coast, solar radiation ranges from 4000 to 6500 kWh/m².

What is the rate of electrification in Madagascar?

The national rate of electrification is only 4.7% only. In urban zones, such as Antananarivo, this value could reach up. In view of the geographic and climatic conditions in Madagascar, the reality of development of renewable energy technologies (RETs) is complicated despite numerous research works carried out in this area.

Why does Madagascar have a high share of wood energy?

This high share of wood energy is explained by its accessibility and its low cost for the population. Madagascar has a low rate electricity access due to its high price and the insufficient quantity production. The national rate of electrification is only 4.7% only. In urban zones, such as Antananarivo, this value could reach up.
