

Did Russia attack Ukraine's energy infrastructure?

Russia has launched a huge attack on Ukraine's energy infrastructure, which authorities said was the 12th large-scale attack on energy facilities this year. Ninety-three missiles and more than 200 drones were used - but 81 of the missiles were shot down, according to Ukrainian President Volodymyr Zelensky.

Is Russia targeting Ukraine's energy system?

Ukraine's energy system has been regularly targeted by Russia since its full-scale invasion in 2022, with attacks intensifying since the spring of 2024. The targeting of energy infrastructure has had wide-ranging consequences for the provision of energy to Ukrainian households and other consumers.

What is energy in Russia?

The Energy in Russia is an area of the national economy, science, and technology of the Russian Federation, encompassing energy resources, production, transmission, transformation, accumulation, distribution, and consumption of various types of energy. Energy consumption across Russia in 2020 was 7,863 TWh.

Will Russia destabilise Ukraine's power system?

Since 2022, Russian targeting of Ukraine's power infrastructure has sought to destabilise the electricity system by disabling large coal and gas-fired generation units and key parts of the transmission network.

How have Russian strikes impacted Ukraine's power infrastructure?

Russian strikes have hammered Ukraine's power infrastructure since Moscow's all-out invasion of its neighbour in February 2022, prompting repeated emergency power shutdowns and nationwide rolling blackouts. Ukrainian officials have routinely urged Western allies to bolster the country's air defences to counter assaults and allow for repairs.

What is Russia's infrastructure plan?

Russia's infrastructure plan includes a total budget of 267.5 billion rubles for developing regional airports. Another Chukotka priority that forms part of the infrastructure plan is Beringovsky port, which handles over 700,000 metric tons of coal per year from the nearby Nagornaya Mine.
