What are Solarex power modules?

Solarex Power Modules are the group of polycrystalline silicon Megamodules with peak outputs above 39 watts. They can be used singly or in arrays, and are the module of choice for midsize and large PV power systems. Their features include: A 25-year warranty (the best in the industry) on power output

What is Solarex Mega (MSX)?

SOLAREX MEGA (MSX) modules are made of silicon PV cells coated with patented ethylene vinyl acetate (EVA) laminated superstrate with tedlar backing. The bronze-anodized aluminum alloy.

What is a polycrystalline silicon solar cell?

More than 20 years ago, Solarex made the first polycrystalline silicon solar cell, advancing photovoltaics beyond the first-generation monocrystalline technology developed for electronics. Developed specifically for photovoltaics, polycrystalline silicon is used in Solarex's Mega™ series to provide a wide range of attractive, efficient modules.

How much does a msx-30 Lite weigh?

The largest, the MSX-30 Lite, weighs only 6 1/2 pounds (3 kg). The modules may be mounted from front or back through four grommet-finished holes which accept fasteners 0.25" (5mm) diameter. Total module thickness is only 16 mm, including the mounting grommets and the low-profile output termination box.
