The electric charge of one electron is equal in magnitude and opposite in sign to the charge of one proton. An ion is an atom or molecule that has nonzero total charge due to having unequal numbers of electrons and protons. The SI unit for charge is the coulomb (C), with protons and electrons having charges of opposite sign but equal magnitude ...

attention to the storage of electricity. To qualify, energy must enter and exit the storage system as electricity. We are also confining attention here to storage related to electric power, which is one of the three major frontiers for electricity storage today, alongside storage for vehicles and for consumer electronics.
