Currently the batteries and the inverter are in a room in the barn with 2 conductors plus ground running to the house. I was hoping to instal a 240v system because the generator I am looking at using has 240v output, the well pump is 240v and I need some occasional use 240v outlets in the barn/shop, I don't need 240v in the house though.

The most common output for 240V solar generators is 3000W from a single solar generator and 6000W when you set up a split phase system. 6000W can power some heavy duty 240V appliances. If you think you need more power than this, get the Hysolis Apollo 5K. It's the only 240V solar generator I've come across that lets you expand power output.

Panel size is varied, but how many solar panels for sheds are needed is vital to know, too. For basic needs, like lights and charging smaller devices, a 50W panel setup can be enough. But if you're going bigger - by running underfloor heating, perhaps - then you're going to want at least three 150W solar panels to do the job.
