Dual-MPPT inverters are a type of solar inverter that uses two Maximum Power Point Tracking(MPPT) channels, This allows the inverter to optimise the power output from two separate arrays of solar panels, Dual-MPPT inverters provide improved efficiency, better energy output, and a more flexible system design compared to single MPPT inverters.

The inverter converts DC (direct current) power generated by solar panels into AC (alternating current) power for use in your home or business. It also has the capability to charge a connected battery bank and can seamlessly switch between solar power, battery power, and grid power based on your energy needs and availability.

Third, solar energy would be used as an emergency power source. Taiwan experiences many typhoons and earthquakes, and even faces the risk of being invaded by China. Solar panels coupled with storage equipment would serve as an emergency source of electricity for daily life or disaster relief if there is any problem with the electricity supply.
