

The impact of the epidemic on the solar container industry

<div class="df_qntext">Why are empty containers a problem in Asia?

Many empty containers piled up in import markets needed to be repositioned back to Asia quickly to meet export demand. Nevertheless, the lack of anticipation combined with port congestions and blank sailings further disrupted the container shipping chain.

<div class="df_qntext">How has international container shipping impacted international freight rates?

One area significantly impacted is international container shipping, where freight rates have become highly volatile. As illustrated in Figure 1, the China Container Freight Index (CCFI) experienced remarkable fluctuations: a 50% surge in 2020, followed by an even more impressive 110% increase in 2021.

<div class="df_qntext">Why did container shipping have a capacity shortage in 2020?

In mid-2020, increased economic activity and sharply rising consumer demand led to a recovery in merchandise trade which in turn caused capacity shortages in the maritime freight sector. During that time, container shipping firms struggled to restore capacity to previous levels.

<div class="df_qntext">How did shipping disruptions affect small importers?

The shipping disruptions and cost increases in the second half of 2020 likely had a disproportionate impact on small importers, according to industry representatives, although firms of all sizes were affected, as discussed in the Nike and Gap examples above. Small firms were likely to be more severely impacted for several reasons.

<div class="df_qntext">How did container repositioning affect shipping rates in 2021?

As a result, a large number of containers became immobilized at container terminals, exacerbating their repositioning. By mid-2021, container shortages across global markets became severe, slowing down supply chains, which pushed shipping rates to levels unseen beforehand.

<div class="df_qntext">How does the epidemic affect freight transport in the post-epidemic period?

The impact of the epidemic on freight transport generates a new paradigm in the post-epidemic period because the characteristics of the post-epidemic period are different from the early period. Third, we apply the DID model in the freight transport field.

In view of the above research deficiencies, this paper takes the second outbreak of the COVID-19 as the time node to analyse the impact of the epidemic on container trade in the two years from 2020 to ...

The first weeks of 2020 had been dominated by the dramatic impact of the COVID-19 pandemic, with effects filtering through to the shipping markets, although impacts varied by sector, as ...

Chen et al. (2018) examined whether the SARS epidemic had an impact on the enduring correlation among

The impact of the epidemic on the solar container industry

stock markets in Asia; their findings showed that the epidemic had weakened the stock ...

It also plans to investigate the nature of the impact. Understanding the level of potential impact and the global channels of transmission will help us predict the extent of current and future ...

ABSTRACT Before and during the epidemic, all major industries were hit and affected to a certain extent. In this paper, the Fama-French five-factor model is used as the basic model. The data from ...

From 2019 to 2021, the impact of the COVID-19 pandemic caused social panic and huge losses for various real economy sectors. For the catering industry, there are many problems that need to be ...

The national catering industry market is slow to warm up overall, without the rapid rebound after the epidemic eases. In the "post-epidemic" era, the restaurant industry still has a tough road ahead. At ...

At present, there are two general attitudes regarding the impact of the epidemic on the industry. One thinks that its impact is great, which is a challenge for the photovoltaic industry. Another believes that ...

The impact of the COVID-19 pandemic on the container shipping industry has been highly variable. Throughout this period, parties in the industry have had to deal with challenges that ...

Due to the double impact of the epidemic and the Spring Festival (Jingwen, 2019), the container liner transportation on the trans-Pacific route has been severely affected.

At the industry level, the epidemic will have the greatest short-term impact on consumer and laborintensive industries. For example, the output value of the service industry will fall ...

Recent studies have investigated the negative impact of the pandemic on the container shipping industry, but the issue of container shortages remains largely unaddressed. This paper ...

Due to varying outbreak periods, when a particular province experiences a severe epidemic, neighboring provinces may anticipate the epidemic and implement planning measures to ...

The COVID-19 epidemic made the most countries to take strict lockdown measures, what has seriously caused an unprecedented impact in the shipping industries, whereas these ...

There are significant differences in the significance, direction and duration of the epidemic on different sectors. In addition, the impact of COVID-19 has been gradual in some ...

ABSTRACT With the outbreak of the new crown epidemic in 2020 and the rapid spread of the epidemic situation, it will have a huge impact on the offline physical retail industry. It has brought huge ...

The impact of the epidemic on the solar container industry

The container shipping industry has undergone significant changes in the post-COVID-19 era. This study examines the impact of the pandemic on container freight rates (CFR) through a demand analysis ...

The impact of the outbreak of new corona-virus on the group's operation is one of the main reasons for the expected decline in net profit. The epidemic has led to heavy losses in the catering industry, ...

The outbreak of COVID-19 has impacted the shipping industry while the extent of the impact is still not fully understood. To quantitatively investigat...

The first weeks of 2020 had been dominated by the dramatic impact of the COVID-19 pandemic, with effects filtering through to the shipping markets, although ...

1.2. Related Research With the sudden outbreak of the epidemic in 2019, countries' economies were caught off guard, and more and more scholars began to study the impact of the epidemic on e ...

To comprehensively assess the impact of COVID-19 on container transport, this research constructed a global container shipping network and applied complex network theory to ...

The COVID-19 pandemic revealed several vulnerabilities of global container shipping, with the shortage of containers being one of the most prominent. Recent studies have investigated ...

Covid-19 pandemic has severely affected the human lives and businesses around the world. Globally, the demand for hospitality services is at an all-ti...

The purpose of this chapter is threefold: First, to analyze the economic impact of the epidemic on Ford through the financial situation, and secondly, how to take economic protection measures and self ...

In this paper, we focus on the effects of the pandemic and the governments' related policies on the container shipping industry. The differential ...

Shipping has played a pivotal role during the epidemic, ensuring that the global logistics functions without disruption. COVID-19 hit various ...

Before and during the epidemic, all major industries were hit and affected to a certain extent. In this paper, the Fama-French five-factor model is used as the basic model. The data from ...

How does the container market achieve industry recovery under the background of the epidemic, and how to apply the successful experience of the container market to other industries is the key content ...

The impact of the epidemic on the solar container industry

In the survey, the potential direction of the future upgrading of catering industry and the impact on other related industries are discussed. Our findings will help catering enterprises survive and operate better ...

Comprehensively measuring and predicting the impact of the COVID-19 epidemic on the global manufacturing industry and its Value Chain is ...

PDF | In the context of COVID-19, this paper will focus on the rebound of the container market in the context of the epidemic, explore its reasons and... | Find, read and cite all the research ...
