<div class="df_qntext">What is a fire resistant container (FRC)?

Nordisk is a leading actor in the development of Fire Resistant Containers (FRC) for shipping of flammable and dangerous goods which could be lithium batteries, In the case of fire, the FRC container is able to handle over 700 degrees Celsius (1300 degrees Fahrenheit) and will suppress flames and contain an active fire for minimum 6 hours.

<div class="df_qntext">How hot can a FRC container handle?

In the case of fire,the FRC container is able to handle over 700 degrees Celsius (1300 degrees Fahrenheit) and will suppress flames and contain an active fire for minimum 6 hours. FRC are available for both lower deck and main deck,with different panel and door configurations to fulfill the customers needs and requirement.

<div class="df_qntext">Which hydraulic fluids are fire resistant?

Table 1: Classification of fire-resistant hydraulic fluids. HFA and HFC water-based fluids offer excellent fire resistance,and both outperform HFB fluids in this respect. HFC fluids are the most used by volume in industry but,for situations requiring greater operational flexibility,HFD luids are preferred.

<div class="df_qntext">Are fire resistant lubricants biodegradable?

Some fire-resistant lubricants, for example, HFDU, have low environmental impact and may also be readily biodegradable. In some applications, the combination of biodegradability and fire resistance in a single hydraulic fluid is a key property, but in others environmental impact may be a secondary consideration.

<div class="df_qntext">What are the different types of fire-resistant hydraulic fluid?

Table 1 summarises information from several sources describing some of the differences in the types of fire-resistant hydraulic fluid, as classified in ISO 6743-4:2015. Table 1: Classification of fire-resistant hydraulic fluids. HFA and HFC water-based fluids offer excellent fire resistance, and both outperform HFB fluids in this respect.
