

U S Virgin Islands life power

What percentage of the US Virgin Islands' electricity generating capacity is solar?

In 2020, less than one-tenth of the U.S. Virgin Islands' electricity generating capacity was fueled by renewables, with about 80% of that capacity coming from customer-installed, small rooftop solar panel systems and about 20% from utility-scale solar energy facilities.

What is the main source of energy in the Virgin Islands?

In the U.S. Virgin Islands, nearly all of the energy is provided by imported petroleum products, with about 70% of petroleum consumption being distillate fuel and residual fuel.

Why should the US Virgin Islands own solar assets?

The US Virgin Islands should invest in solar assets for enhanced portfolio diversification and risk mitigation. WAPA ownership guarantees coverage by WAPA and FEMA during natural disasters, eliminating uncertainties (1. Enhanced Portfolio Diversity: WAPA diversifies its energy portfolio, ensuring a more resilient and sustainable future).

How much does a kilowatthour of electricity cost on Virgin Island?

The average price of electricity paid by U.S. Virgin Island residents was about 41 cents per kilowatthour in early 2022, which was almost three times higher than the U.S. average power price of 15 cents per kilowatthour.

Do St Thomas and St Croix have electricity?

As of late 2014, both St. Thomas and St. John were served by one electrical grid run by the Virgin Island Water and Power Authority (WAPA). St. Croix, however, has a separate electrical grid in the WAPA service area. More than 1,000 distributed renewable energy systems were connected to the WAPA grid.

How does oil affect the cost of electricity in the USVI?

The USVI, like many island nations, is heavily reliant on fossil fuels for electricity generation. This reliance leaves the USVI vulnerable to global oil price fluctuations, which directly impact the cost of electricity. Assumes an average electricity price of \$0.50/kWh and consumption of 767.4 gigawatt-hours (GWh).
