

# Use of electronic ignition for solar container furnace

<div class="df\_qntext">What is a high energy ignition system?

High energy ignition systems are electrical ignition systems for the safe, direct ignition of gas and liquid fuels. In contrast to high voltage ignition systems, they deliver significantly more ignition energy and are less sensitive to moisture and dirt.

<div class="df\_qntext">What is electronic spark ignition of a flare pilot burner?

Electronic spark ignition of a flare pilot burner is simple and easy to automate and more frequently becoming the preferred flare ignition method. There are two basic forms of these systems; high energy (HE) and high tension (HT). The HE ignition unit generates the tension and energy that is needed to make a reliable spark for pilot gas ignition.

<div class="df\_qntext">What are the different types of electronic ignition systems?

There are two basic forms of electronic ignition system, high energy and high voltage. The high energy systems operate at lower voltages using a capacitor to deliver a high-energy spark as insulation breaks down at voltages in the region of 600 volts.

<div class="df\_qntext">What does a furnace ignitor do?

As its name implies, the furnace ignitor creates a spark, igniting the gas to heat the air circulating through your home. The ignitor is a critical part of your furnace. Our guide covers the causes of faulty ignitors, when to replace them, and if a furnace ignitor replacement is a DIY project or you should call in the pros.

<div class="df\_qntext">What is a hot surface ignitor on a furnace?

Unlike older furnaces that require an actual flame to operate, modern furnaces use an electronic ignition that has a hot surface ignitor. The ignitor sits beside the gas burners, and when the thermostat communicates that it's time to distribute warm air, the hot surface ignitor can reach 2500 degrees Fahrenheit.

<div class="df\_qntext">What is the John Zink flare ignition system?

The John Zink STELLA (TM) Flare Ignition System is an advanced, electric-powered flare ignition solution that eliminates the need for pilot fuel gas and instrument air, reducing emissions, maintenance, and capital costs. Designed for vertical and horizontal flare applications, STELLA is the future of efficient, sustainable flare ignition.

The furnace started its baseline operations in January 2024, already producing up to 170 tonnes of container glass per day and sourcing 15% of its heat supply from electricity. The hybrid ...
